- **Refrigeration parts & supplies**
- **Climate Controlled Greenhouses**
- **Custom storage shelves**
- **Combination Walk-ins**

Stainless Steel, White Smooth or Stucco Finishes. Also available in Black.

What Are Industrial Panels? Insulated Custom Storage Walls, Ceilings and Floors. Ideal for climate controlled greenhouse.

Industrial panels are insulated panels specifically designed and constructed for use in the walls, ceilings, and floors of cold storage facilities and warehouses. They are an integral component in the structure of the building and play a crucial role in creating and maintaining controlled environments for the storage of temperature-sensitive goods.

Dade Industrial Panels are insulated metal panels composed steel skins laminated to a minimum of 1.6" polyisocyanurate foam core (minimum 2.3 pcf density). They are made to order with custom measurements that avoid waste and measure up to 39 ft. in length and usable width of 1000mm/39 3/8".

ASK ABOUT OUR CUSTOM FINISHES AND OPTIONS

- Ceiling suspension systems
- Doors, windows and ramps
- Spring loaded, chrome plated hardware
