- **Commercial refrigerators/freezers**
- **Cold storage insulated warehouses**
- **Mortuary compartments**
- **Nursery/Greenhouse**
- **Healthcare cold storage**
- **Replacement parts**

What Are Industrial Panels?

Insulated Custom Storage Walls, Ceilings and Floors.

Industrial panels are insulated panels specifically designed and constructed for use in the walls, ceilings, and floors of cold storage facilities and warehouses. They are an integral component in the structure of the building and play a crucial role in creating and maintaining controlled environments for the storage of temperature-sensitive goods.

Dade Industrial Panels are insulated metal panels composed steel skins laminated to a minimum of 1.6" polyisocyanurate foam core (minimum 2.3 pcf density). They are made to order with custom measurements that avoid waste and measure up to 39 ft. in length and usable width of 1000mm/39 3/8".

Stainless Steel, White Smooth or Stucco Finishes. Also available in Black.
